- Wireframing & Prototyping
- Developer Handoff & Documentation
- Front-End Development (HTML/CSS/JS)

EDUCATION

BFA, Electronic Design & Multimedia

The City College of New York

Product Design Certificate

Designlab UX Academy

LOCATION

New York / New Jersey

Alice Curiel

Product & UX Designer, Healthtech & Civic Tech

METHODS

I build clean, human-centered experiences that move people, working at the intersection of visual excellence and rigorous product thinking. My process pairs qualitative research and usability testing with systems-level design, turning ambiguous problems into scalable design systems and interfaces that hold up in production. I lead cross-functionally from early discovery through developer handoff, treating stakeholder alignment and clear documentation as part of the craft, not an afterthought.

WORK EXPERIENCE

Freelance Creative & Product Director at Diapulse Technologies Corporation

2024 - Present

Sole designer directing the rebrand of Diapulse, a 30-year legacy medical device brand, overseeing developers on implementation and partnering with an industrial designer on the physical product's form and color system, alongside the visual identity system, information architecture, and full website redesign, backed by a verified clinical research library and detailed product wireframes. The rebrand was fully adopted across identity, hardware, and software, with the redesigned clinical interface now live in real clinical environments.

Creative Lead & Designer at Hush Tech LLC

2024 - 2026

Direct brand and product design for WAVE, an FDA clinical trial device, leading a designer's execution against the system while building the visual identity and design system from the ground up, then extending it into a complete ePRO app experience grounded in real clinical protocol requirements. The new identity launched at the ACOG exhibit, one of the most prominent healthcare professional conferences in the U.S.

Creative Director at Quest Technologies LLC

2019 - 2023

Served as Creative Director for a small team of two developers and a junior designer, personally driving all design decisions and contributing front-end development, delivering brand identity and web product design for a roster of 30+ business clients, including healthcare organizations, and hand-coding cohesive visual systems spanning websites, marketing materials, and digital touchpoints. Built reservation- and appointment-enabled websites that let clients' customers self-schedule directly online, eliminating phone-dependent booking and streamlining business-to-client communication. Delivered projects on an average three-week turnaround depending on scope, sustaining strong client retention through ongoing updates and platform upgrades.

Web Communications Coordinator at Hostos Community College

2017 - 2019

Managed large-scale digital communications reaching audiences of up to 20,000, and led a citywide MTA advertising campaign for the college's 50th anniversary.
